EXPERIENCE

Software Developer II **August 2024 – Present**
FTI Consulting, Software Solutions, New York, NY

- Full-stack developer on FTI's 30-person engineering team; founding member of the flagship internal AI platform (8,000+ users), building the full application layer over the models; also build and run two external client platforms that calculate bonuses and sales incentives from client financial data
- Own major features from request to production, designing and iterating the UX and architecting the solution; work spans compliance/data-retention systems, client data ETL pipelines, external API integrations, and Gen AI features (LLM query processing, response streaming, skills/artifacts)
- Lead client meetings and live demos as the technical point person: turn non-technical stakeholders' needs into concrete requirements, explain tradeoffs in plain language, and own follow-through until the fix or feature is live
- Engineer for application performance and scale: streaming live AI responses to thousands of concurrent users without blocking (background job processing, WebSocket streaming, Redis-backed caching and sessions)
- Primary US-hours owner of production: independently ship UAT/production releases and hotfix live issues after the London team logs off (Terraform, CloudWatch, S3)

Backend Developer Intern **May 2023 – August 2023**
IBM, Sales Technology Engineering, New York, NY

- Completed full-stack Sales Cloud API & reporting dashboard project with Node, MongoDB, and React Optimized prospecting list creation process to increase seller success rates
- Achieved third place in the division-wide intern project showcase with multiple successful presentations

Software Engineer Intern **May 2022 – August 2022**
Solipay Tech, New York, NY

- Full-stack engineer intern on mobile app development at a venture-backed fintech startup (100k+ downloads)
- Improved backend infrastructure through GCP logging, error handling, and testing; built automated transactional email flows/verification with Mailgun, triggered by signup and account events
- Engineered iOS/Android UI/UX in React Native — login/home screens, onboarding flows, user experience

EDUCATION

University of Virginia **May 2024**
Charlottesville, VA

- **Bachelor's Degree:** Major: Computer Science, Minor: Data Science. **GPA:** 3.9/4.0
- **Leadership & Activities***:* Undergraduate Teaching Assistant, School of Engineering (3 years) | UVA Student Council Member (2 years) | Student Tutor (2 years) | Recruitment Data Assistant, Kappa Alpha Theta (1 year)
- **Academic Projects:** AI game agent creation with Deep Reinforcement Learning, full-stack Taxi Service and Fitness Tracker applications; algorithmic solutions including Huffman Coding and optimization problems

SKILLS

- **AI & Cloud:** LLM application layer (query processing, response streaming, tool/skill configuration, Bedrock-backed models via internal service layer), ECS, S3, IAM, RDS, CloudWatch, SQS, Microsoft Graph API
- **Languages:** Python, JavaScript, Java, SQL, TypeScript, C++, HTML/CSS, R
- **Frameworks & Libraries:** React, Laravel, Angular, Node.js, React Native, TensorFlow, NumPy, Pandas
- **Tools & Platforms:** Terraform, Figma, Git, Docker, Launch Darkly, Filament, WebSockets, Redis, MongoDB, PostgreSQL, Xcode, Excel, Outlook, Tableau, Adobe Photoshop/Illustrator
