EXPERIENCE

Software Developer

August 2024 – Present

FTI Consulting, Software Solutions, New York, NY

- Full-stack developer on FTI's only internal engineering team (30-person group); core member of company's flagship internal AI platform (8,000+ users) and contributor to two external client solutions, consistently delivering senior-level work
- Own major features end to end with minimal guidance — from compliance systems like automated data retention, to a monthly data pipeline and SQL-based analysis for client financial data, to user-facing AI/LLM capabilities like live answer streaming, custom skill creation, and Bedrock-integrated query processing
- Handle real-world performance and scaling demands behind our web applications — streaming live AI responses to thousands of concurrent users without blocking (background job processing, WebSocket streaming, Redis-backed caching and sessions)
- Serve as primary US timezone point of contact for AWS infrastructure — independently complete UAT/production deployments, debug production issues through logs and database queries, and resolve cross-team infrastructure requests across Terraform, CloudWatch, and S3
- Lead client-facing meetings and demos, translating technical concepts for non-technical stakeholders; conduct code reviews, write documentation, and design and prototype new features using Figma

Backend Developer Intern

May 2023 – August 2023

IBM, Sales Technology Engineering, New York, NY

- Worked on Agile full-stack project using Node, MongoDB, and React for Sales Cloud API & reporting dashboard
- Optimized prospecting list creation process to increase seller success rates
- Achieved third place in the division-wide intern project showcase with multiple successful presentations

Software Engineer Intern

May 2022 – August 2022

Solipay Tech, New York, NY

- Worked as a Full Stack Engineer in Mobile App Development at fintech startup with Agile methodology and weekly sprints
- Enhanced backend infrastructure by improving GCP logging, error handling, and testing; developed formatted email templates and SQL data manipulation workflows
- Utilized Xcode and React Native for iOS/Android UI/UX engineering including login/home screens, email verification, user onboarding, and data visualizations

EDUCATION

University of Virginia

May 2024

Charlottesville, VA

- **Bachelor's Degree:** Major: Computer Science, Minor: Data Science. **GPA:** 3.9/4.0
- **Leadership & Activities:** Undergraduate Teaching Assistant, School of Engineering (3 years) | UVA Student Council Member (2 years) | Student Tutor (2 years) | Recruitment Data Assistant, Kappa Alpha Theta (1 year)
- **Academic Projects:** Built AI game agents with Deep Reinforcement Learning, full-stack Taxi Service and Fitness Tracker applications; implemented algorithmic solutions including Huffman Coding and optimization problems

SKILLS

- **Languages:** Python, JavaScript, Java, SQL, TypeScript, C++, HTML/CSS, R
- **Frameworks & Libraries:** React, Laravel, Angular, Node.js, React Native, TensorFlow, NumPy, Pandas
- **Tools & Platforms:** AWS, Terraform, Figma, Git, Docker, Launch Darkly, Filament, WebSockets, Redis, GCP, MongoDB, PostgreSQL, Xcode, Excel, Outlook, Tableau, Adobe Photoshop/Illustrator
